DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-16 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-16 and 1-12 of copending Application No. 10/779,492 and 10/779,505. Although the conflicting claims are not identical, they are not patentably distinct from each other because the scope of the set of claims overlaps. Further, the oil and optional wax are conventional auxiliaries used in adhesive applications. As such, use or omission of these ingredients is obvious to one of ordinary skill in the art.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 5. Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Komatsuzaki et al. US 6,534,593 or Vaughan et al. US 6,531,544 or Kuppers US 5,939,483.
- 6. Each of the cited patents teaches hot melt adhesive compositions, and bonding substrates using block polymer compositions. The claimed radial polymer is shown in Komatsuzaki et al. as component (b), Vaughan et al. at column 4, lines 19+ and Kuppers at column 5, lines 30+. These patents further suggest the incorporation of the claimed linear, or diblock, polymers see Komatsuzaki et al. as component (a), Vaughan et al. at column 4, lines 7+ and Kuppers at column 5, lines 30+. The tackifying resin and plasticizer components are shown in Komatsuzaki et al. at column 10 line 39 to

Application/Control Number: 10/779,420

Art Unit: 1713

column 11 line 29, Vaughan et al. at column 4, lines 36 to column 5 line 55 and Kuppers at column 4, lines 65+ and column 6 lines 20+. The wax component is optional and the incorporation thereof is identified in the patents. These patents lack an anticipatory teaching of the claimed invention. The patents do, however, provide one of ordinary skill in the art clear direction to formulate adhesive compositions within the scope of the claims. Each of the claimed ingredients is shown and suggested to be used in combination in the claimed amounts. As such one would have found the invention prima facie obvious at the time of invention.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Peter D. Mulcahy whose telephone number is 571-272-1107. The examiner can normally be reached on Mon.-Fri. 8-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Wu can be reached on 571-272-1114. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
